this is a study of events and their place in our language and thought the author discusses what kind of item an event is how the language of events works and how these two themes are interrelated he argues that most of the supposedly metaphysical literature on events is really about semantics of their names and that the true metaphysic of events known by leibniz and

rediscovered by jaegwon kim has not been universally accepted because it has been obscured by a false semantic theory

we effortlessly recognize all sorts of events from simple events like people walking to complex events like leaves blowing in the wind we can also remember and describe these events and in general react appropriately to them for example in avoiding an approaching object our phenomenal ease interacting with events belies the complexity of the underlying processes we use to deal with them driven by an interest in these complex processes research on event perception has been growing rapidly events are the basis of all experience so understanding how humans perceive represent and act on them will have a significant impact on many areas of psychology unfortunately much of the research on event perception in visual perception motor control linguistics and computer science has progressed without much interaction this volume is the first to bring together computational neurological and psychological research on how humans detect classify remember and act on events the book will provide professional and student researchers with a comprehensive collection of the latest research in these diverse fields

bringing varied perspectives on problems related to reference from philosophers of language and linguists this edited collection initiates a dialogue between the two fields the contributors to this volume both philosophers and linguists answer four questions what is reference is there reference to the abstract is there sentential reference is there reference to time each chapter is followed by two responses a linguist will comment on what the philosopher said and how it can impact the research made in the related linguistic field while a philosopher will comment on what the linguist said in a similar sort of fashion edited by ana clara polakof linguistic and philosophical perspectives about reference highlights ways that linguistics and philosophy of language are currently closely connected and can mutually benefit from sustained interaction

the philosophy of language is not an isolated philosophical discipline of merely technical interest to other philosophers rather as mark platts shows the philosophy of language can help to solve traditional problems in other areas of philosophy such as metaphysics epistemology and ethics ways of meaning provides a clear comprehensive introduction to such issues at the forefront of philosophy assuming only minimum knowledge of elementary formal logic the book shows how taking truth as the central notion in the theory of meaning can clarify the relations between language reality and knowledge and thus illuminate the nature of each this second edition of the book contains a new chapter on the notions of natural kind words and natural kinds unlike other discussions of the subject this one places the semantic issues involved in the context of questions about the relations between knowing subjects and known objects the author has also added a bibliography of further readings published since the first edition appeared in 1979

this book presents theories and clinical practices for dealing with children diagnosed with pervasive developmental disability or pdd these are children who have a wide range of disabilities that affect their participation in even the most routine events of daily life such as eating dressing bathing and so on unlike many who are diagnosed with classic autism however these children seem to have normal social behavior normal physical appearance the ability to learn hear see and move their bodies at will in other words none of the well known reasons that cause autistic and other children to develop differently these children have the use of all their senses but their brains are unable to process the information that is fed through them while much new research is being done in genetics and neurobiology to explain why something in these children has gone fundamentally wrong with their development clinicians and therapists who deal with them on a daily basis have needed to develop practical therapies based on how the children react to their environments movement and action in learning and development suggests that when therapists plan treatment strategies children's experiences and interactions with the world should be given the same consideration as the limits of their biological makeups too often children diagnosed with pdd are lumped into therapy groups for the classically autistic where the focus tends to be on the distance senses hearing and vision case studies presented in the first half of the book suggest that for children with pdd there is a disconnect between the brain and the tactile kinesthetic senses that involve body movement and physical interaction with the world movement in turn seems to be connected to perception interpretation of the world around and ultimately the acquisition of knowledge for

children with pdd normal learning seems to be limited not only by their tactile kinesthetic sense but also by the lack of collaboration between all the senses the second half of the book demonstrates how these new theories translate into clinical practices
